

EBCE's Renewable 100 for LEED

There are hundreds of buildings in Alameda County that have received [LEED certification](#) from the U.S. Green Building Council. Leadership in Energy and Environmental Design (LEED) is the most widely used green building rating system in the world. LEED certified buildings are more environmentally sustainable, attract tenants, cost less to operate, and boost employee productivity and retention. East Bay Community Energy wants to encourage environmentally-friendly and healthy buildings in our service area.

LEED's rating system recognizes the role of green power in reducing the environmental impact of a building, and provides applicants with the opportunity to [obtain points](#) for matching 50% or 100% of a building's use with Green-e certified renewable energy for at least five years. For that reason, EBCE is offering a [Green-e Energy](#) certified version of our Renewable 100 product.

Renewable 100 for LEED is:

- Sourced from 100% renewable energy that is generated in California or delivered into our regional grid - it is not sourced from unbundled Renewable Energy Certificates (RECs).
- Green-e Energy certified by the Center for Resource Solutions
- Priced at 1 cent per kilowatt-hour above PG&E rates
- Available with a 5-year commitment

Note that EBCE's standard sales of Renewable 100 are month-to-month and not Green-e certified; this opportunity for Green-e certified, LEED-eligible supply must be procured through an individual, signed agreement.

For more information or to enroll in Renewable 100 for LEED, please contact Dan Lieberman at dlieberman@ebce.org or 925-579-1591.
